

# Packages of Emergency care

## Summary

This project is to support children to have their hands properly washed while they are staying home. Currently, schools all across Cambodia are closed due to virus SARS-CoV-2. Parents are desperate to secure daily food support for their families. Because of SARS-CoV-2, there are many families losing their jobs, and therefore access to income. Some families cannot even support their own daily meal. A few months ago, we joined an effort by local monks to support food to more than 100 families in cut off areas and now we are aspiring to help them with something that our organization excels in, tremendously benefitting them. Hand sanity is the one of the core elements of effective combat against coronavirus.

Our target is to provide those same 100 families with one hand washing devices and a package of food supplies. They will be carefully selected through research, analysis and discussions with core stakeholders such as school directors and village chief to ensure maximum effectiveness of this valuable project.

**Total raising goal is 2,500 USD**

N°	Items	Amount	Unit	Total
1	will provide one Hand washing device	\$10	100pax	\$1000
2	will provide one package of food supplies (rice, noodle and soy sauce)	\$15	100pax	\$1500
<b>Grand Total</b>				<b>\$2500</b>

## **Challenge**

The children are currently unable to attend school and we do not know when they can return back. School means education but also supervision and daily routines. One, at times both parents lost their jobs during the COVID 19 pandemic.

## **Solution**

The hand washing devices can help children at home circumventing infection by the virus. They will receive “hardware” (the device”) and “software” (training from us how to deploy the device) to avoid the virus. Additionally, the planned package of food supply will help them to overcome hardship.

## **Long-Term Impact**

We intend to strengthen hygienic practices for the future. We know that many viruses transmit via hands when touching things and that have not been cleaned properly. The good practices with washing hand will stay long, ideally forever, with the kids and their families, long after this species of viral threat is hopefully gone.
