

Ponheary Ly Foundation (PLF)
Support Science Labs at Two Locations for One Year: \$800

PLF has developed Science Labs for middle schoolers that follow and supplement the public school curriculum. With science being taught in government classes purely via textbook, our project-based lessons fill these learning gaps with the missing practical experiments and hands-on activities required to fully understand the subject material while bringing loads of fun and creativity.

The list of resources that make these lessons turn into useful experiments ranges from the expected – owl pellets, tweezers, and magnifying glasses – to the downright mind-boggling – shaving cream, marshmallows, Q-tips, and Styrofoam balls!
